A Benchmarking System to Spark Companies to Action - Innovation That Fuels New Deal Flow and Growth Pipelines

March 2024

FROST & SULLIVAN

Strategic Imperative and Growth Environment

Strategic Imperative

Factors Creating Pressure on Growth

- The dearth of cybersecurity professionals continues to shape the industry, becoming a thorn in global organizations' side as they try to secure their growing environments.

- Faced with a lack of access to professionals and an inability to protect their business-critical data effectively, organizations are outsourcing to alleviate the issue.

- MDR service providers can offer top-tier security across the environment, delivered by experienced professional teams that partner with and support organizations in establishing effective security perimeters.

- In the next three years, organizations will continue investing in outsourced security through MDR services as it enables them to focus personnel on the core business instead of building internal security operations centers (SOCs).

- AI, ML, and automation have become increasingly integral to cybersecurity solutions. These technologies enhance detection and response and allow SOC analysts to focus on what's important instead of chasing down false alerts.

Source: Frost & Sullivan

Strategic Imperative

Factors Creating Pressure on Growth

- But automation cannot replace human analysts just yet, as organizations cannot trust AI to handle complex decision-making beyond detection and response.

- As organizations seek alternative ways to cope with the shortage of security analysts, they will adopt solutions that leverage ML and AI in combination with the ever-important human factor.

- As a result, security services such as MDR will continue to thrive in the next three years while security providers invest in developing and enhancing automated security assistants.

- Due to the sophisticated nature of the latest cyberattacks, the growing incidence of nation-state-sponsored threats, and the increasing number of cybersecurity incidents, there's an arms race between threat actors, security solutions, and service providers.

- Organizations are caught in the middle, with the pressure to understand, invest in, and keep up with the latest developments in the cybersecurity industry to protect their environments.

- As digital transformation continues and geopolitical conflicts around the globe progress, organizations will continue to be targeted by complex cyberattacks and data breaches.

Source: Frost & Sullivan

Strategic Imperative

Factors Creating Pressure on Growth

- MDR's promise to bolster an organization's security posture with 24/7 monitoring, state-of-the-art detection and response, and incident response capabilities will resonate with global organizations for the foreseeable future.

Source: Frost & Sullivan

Growth Environment

- According to Frost & Sullivan's <u>2023 Voice of the Enterprise Security Customer survey</u>, 36% of global organizations were using MDR at the beginning of 2023, with a further 26% of them planning to invest in the service by 2024.

- MDR has witnessed widespread adoption in 2023, with a growth rate of 35.2% and a compound annual growth rate (CAGR) of 25.3% expected from 2023 to 2026. MDR has made significant waves in the cybersecurity industry thanks to its ability to address many of global organizations' most pressing pain points.

- The dearth of security talent and the rapid increase in the number and sophistication of threats generate the perfect conditions for MDR to thrive. These driving factors are not expected to diminish soon and will continue to push organizations to outsource their security, either partially or completely.

- The growth rate and customer adoption of MDR services will remain high for the foreseeable future, as the platform's drivers far outweigh its restraints and limitations.

Source: Frost & Sullivan

Growth Environment

- The lion's share of MDR revenue and adoption comes from North America, but Europe, the Middle East, and Africa (EMEA) is a close second. These regions' higher maturity and cybersecurity focus and increased government involvement in guiding organizations toward effective security strategies and compliance make MDR a great option for businesses in both regions. They will continue growing rapidly for the next three years and remain high-priority investments for MDR providers.

- As with most high-end cybersecurity solutions and services, Latin America (LATAM) and Asia-Pacific (APAC) account for smaller contributions to MDR revenue. Nonetheless, these regions have a higher potential for growth, as the CAGR is higher for the 2023–2026 period, showing that adoption is expected to ramp up for local organizations. The new MDR message, with extended incident response and adjacent services that increase maturity and awareness, resonates with regional companies. Highly involved MDR partners could leverage their competitive differentiators to expand into these regions in the next few years.
Source: Frost & Sullivan

Growth Environment

- Organizations across various company sizes consider MDR a worthwhile option to secure their business-critical assets. While enterprises with more than 10,000 employees account for less revenue and growth, it is to be expected from companies that have already invested in their SOCs and have experienced analysts working with them.

- The highest-spending industry verticals for MDR are finance, government, manufacturing, and technology & telecommunications. Overall, adoption is high across every sector, with every MDR provider focusing on different integrations, providing visibility into distinct environments, and delivering multiple adjacent services. Such specialization means most organizations can find an MDR partner that meets their needs and use cases.

Frost Radar™: Managed Detection and Response, 2024

Frost Radar™
Competitive Environment

- In a rapidly growing field of more than 150 industry participants with revenue greater than $1 million, Frost & Sullivan independently plotted 22 growth and innovation leaders in the MDR space in this Frost Radar analysis.

- Over the last few years, MDR providers have developed solutions to deliver extensive visibility over the environment, advanced detection of the most pervasive threats, and a veteran team of expert security analysts supported by AI, ML, and automation capabilities. MDR has become the primary way of delivering SOC services, unifying capabilities such as detection and response, investigation, threat hunting, and more under a single platform.

- Because of this, the MDR sector will continue to see an influx of new competitors from very different spaces, including endpoint detection and response (EDR) and extended detection and response (XDR) vendors, players with extensive coverage and portfolios, and managed security services providers (MSSPs) wanting to leverage their ample service offerings.

Frost Radar™
Competitive Environment

- MDR providers will face fierce competition from XDR vendors and MSSPs that do not provide managed XDR or an MDR platform. These spaces seek to provide organizations with comprehensive and centralized security that enables and empowers the customers' analysts via many of the same features.

- The most significant innovations of highly successful MDR platforms and services include implementing threat detection across a wide range of environments to address multiple use cases, leveraging world-class threat intelligence and ML features to empower analysts, providing a synergistic portfolio of complementary managed and professional services to multiply the value of the MDR service; integrating third-party telemetry sources to augment flexibility; and developing and implementing large language models (LLM) tools and generative AI security assistants to ramp up the effectiveness of new analysts and facilitate the lives of experienced ones.

Source: Frost & Sullivan

Frost Radar™
Competitive Environment

- DeepSeas uses their MSSP pedigree to provide a wide variety of additional and complementary services to traditional MDR capabilities and leverage their veteran, multi-specialization teams of cybersecurity professionals. As a result, these competitors create positive feedback loops between their synergistic offerings, dramatically increasing customer cyber resilience. These competitors differ in market focus and growth strategies but are at the forefront of innovation in the MDR space.

Companies to Action:
Companies to Be Considered First for Investment, Partnerships, or Benchmarking

Company to Action: DeepSeas

Innovation

- DeepSeas provides MDR services through its Cyber Defense Platform, a unified platform and command center for the customers' security needs, including 24/7 monitoring, detection, incident response, security planning, and numerous other tools and services. Using vendor-agnostic XDR technology, DeepSeas has adopted an open approach to MDR. DeepSeas ingests telemetry from the customer's existing security solutions and enhances it with threat detection intelligence to increase cyber resilience. The Cyber Defense Platform also integrates the customer's security stack to orchestrate and correlate across the endpoint, cloud, IoT, OT, network, and other attack surfaces.

- DeepSeas aims to deliver a flexible incident response according to customer needs, ranging from providing alerts and incident support for the customer team to deal with the threat efficiently (what the company calls "little r") to an in-depth, comprehensive hands-on-keyboard response (categorized as "big R") for customers that prefer to outsource their security fully. This is all provided through a combination of orchestration technology (such as automated playbooks) and an expert team of analysts.

Company to Action: DeepSeas

Innovation

- DeepSeas leverages acquisitions, R&D investments, and partner development to continue to enhance its platform. The company has recently introduced a data collection API and a data normalization pipeline to support its open vision of MDR, allowing the solution to thrive in a vendor-agnostic customer environment. It has made improvements to its metrics and reporting engine (DeepSeas Insights) to provide more transparency, increased integration with EDR, security information and event management (SIEM), network detection and response (NDR), and email solutions provided by top-tier security vendors such as Microsoft, CrowdStrike, SentinelOne, Carbon Black, Sophos, Palo Alto Networks, Splunk, Devo, and more; and recently enhanced its service with advanced anomaly detection and UEBA capabilities, among many other innovations.

- DeepSeas combines and complements its MDR service with many professional service capabilities, empowering customers to plan and execute transformational cybersecurity strategies more easily, assess their perimeters' limits, strengths, and weaknesses, and improve resilience across the environment.

Source: Frost & Sullivan

Company to Action: DeepSeas

Innovation

- DeepSeas' portfolio of professional services includes chief information security officer (CISO) advisory and virtual CISO, incident response readiness, and continuous control validation services, including breach and attack simulation (BAS), penetration testing, and vulnerability management.

Source: Frost & Sullivan

Company to Action: DeepSeas

Growth

- DeepSeas is the result of the 2022 acquisition of Booz Allen Hamilton's commercial managed threat services (MTS) by Security On-Demand. The company leverages the experience, market share, and expert teams of both parts of this union, allowing it to grow at a faster-than-average rate in the MDR space.

- DeepSeas aims to deliver its services to mid-market and large enterprises, mainly in North America. The company's customer base cuts across all segments, with concentrations in the state and local government, education; life sciences; and manufacturing sectors. Thanks to the high degree of visibility its platform has in OT and IoT environments, it has developed unique solutions for the healthcare and manufacturing industries.

- DeepSeas uses different strategies to reach a wider customer base, including a combination of channel partner relationships and its open and vendor-agnostic MDR technology for some segments and direct sales, marketing efforts, and product development efforts for others.

Source: Frost & Sullivan

Company to Action: DeepSeas

Growth

- Additionally, through its "little r–big R" approach, the provider focuses on flexibility to extend its services across customers with varying degrees of security maturity and address distinct use cases. DeepSeas combines such an approach with consumption-based pricing based on the estimated alert volume that the company expects from each customer. This allows smaller businesses and organizations to enhance their security and maturity without straining their budgets.

Company to Action: DeepSeas

Frost Perspective

- DeepSeas continues to deliver on the legacy of Booz Allen Hamilton's top-tier innovation in the MDR sector. The company's open approach to leveraging existing third-party solutions in the customer's security environment, the visibility its technology provides into increasingly important areas like IoT devices and OT, its commitment to innovation through high R&D spending, and its compelling roadmap put the company ahead of most in the innovation index of the MDR Frost Radar.

- DeepSeas understands the importance of professional services, consulting engagements, and assessments as an increasingly essential part of MDR. These tools help customers develop and implement innovative security strategies, deploy increasingly complex solutions that complement MDR, and help show the value of MDR internally to stakeholders. DeepSeas should continue to focus on these services in conjunction with delivering excellent incident response to enhance the relationship with customers.

- DeepSeas must put more emphasis on other regions. While North America is still a greenfield for MDR adoption, EMEA, APAC, and LATAM will outpace the MDR revenue growth in the market in the short term, and organizations in these regions will need the help of MDR providers in the mid-to-long term.

Source: Frost & Sullivan

Company to Action: DeepSeas

Frost Perspective

- Acquisitions in these regions can provide a helpful beachhead for the company, and working with local MSPs can extend DeepSeas' reach further.

FROST & SULLIVAN

Key Takeaways

Key Takeaways

1 MDR can benefit any organization and enjoys high adoption across many industry verticals; it caters to the needs of diverse global organizations with different use cases and maturity levels.

2 Frost & Sullivan's 2023 Voice of the Enterprise Security Customer survey revealed that 1in 2 organizations that spend money on security services, such as managed security services (MSS), professional security services (PSS), MDR, threat intelligence services, and SOC monitoring, used MDR in early 2023. A further 36% of these enterprises plan to add MDR by 2024.

3 The percentage of MDR adopters out of all organizations is also significant, with 36% using it by 2023 and 26% planning to deploy it by 2024.

Source: Frost & Sullivan

Key Takeaways

4

Collaboration or outsourcing: MDR providers have different approaches as to how the service should be delivered. Some are at their best when collaborating with customer security teams, increasing their maturity over time and performing threat hunting and investigations as a unified group. Other providers prefer to take care of everything themselves, sending periodic reports to customers and allowing them to focus their resources elsewhere. MDR can completely replace or assist and empower your cybersecurity team and everything.

5

Environment visibility: Top-tier MDR players can provide visibility across various environments, from the classic trio of endpoint, network, and cloud to email, identity, containers, OT and IoT devices, and others. However, focus can also be a good choice. If your organization only needs to cover a few specific environments, looking for a specialized vendor that provides the deepest visibility across fewer security controls is better.

Source: Frost & Sullivan

Key Takeaways

6

Adjacent service offering: A comprehensive portfolio of additional synergistic tools and services will make MDR a more flexible solution than it already is, empowering your organization with additional capabilities at a fraction of the cost. Those tools, however, are as varied as MDR providers. MSSPs with cutting-edge MDR solutions can usually provide a wider set of adjacent managed tools and professional services. However, leading pure-play vendors are heavily investing in providing these as well. If you seek to advance your organization's security maturity and develop your security team, consulting engagements, assessments, and penetration tests can be a worthy addition to MDR.

Frost Radar™ Analytics

Frost Radar™: Benchmarking Future Growth Potential
2 Major Indices, 10 Analytical Ingredients, 1 Platform

GROWTH INDEX ELEMENTS

VERTICAL AXIS

Growth Index (GI) is a measure of a company's growth performance and track record, along with its ability to develop and execute a fully aligned growth strategy and vision; a robust growth pipeline system; and effective market, competitor, and end-user focused sales and marketing strategies.

- **GI1: MARKET SHARE (PREVIOUS 3 YEARS)**
  This is a comparison of a company's market share relative to its competitors in a given market space for the previous 3 years.

- **GI2: REVENUE GROWTH (PREVIOUS 3 YEARS)**
  This is a look at a company's revenue growth rate for the previous 3 years in the market/industry/category that forms the context for the given Frost Radar™.

- **GI3: GROWTH PIPELINE**
  This is an evaluation of the strength and leverage of a company's growth pipeline system to continuously capture, analyze, and prioritize its universe of growth opportunities.

- **GI4: VISION AND STRATEGY**
  This is an assessment of how well a company's growth strategy is aligned with its vision. Are the investments that a company is making in new products and markets consistent with the stated vision?

- **GI5: SALES AND MARKETING**
- This is a measure of the effectiveness of a company's sales and marketing efforts in helping it drive demand and achieve its growth objectives.

Frost Radar™: Benchmarking Future Growth Potential
2 Major Indices, 10 Analytical Ingredients, 1 Platform

INNOVATION INDEX ELEMENTS

HORIZONTAL AXIS

Innovation Index (II) is a measure of a company's ability to develop products/services/solutions (with a clear understanding of disruptive Mega Trends) that are globally applicable, are able to evolve and expand to serve multiple markets, and are aligned to customers' changing needs.

- **II1: INNOVATION SCALABILITY**
  This determines whether an organization's innovations are globally scalable and applicable in both developing and mature markets, and also in adjacent and non-adjacent industry verticals.

- **II2: RESEARCH AND DEVELOPMENT**
  This is a measure of the efficacy of a company's R&D strategy, as determined by the size of its R&D investment and how it feeds the innovation pipeline.

- **II3: PRODUCT PORTFOLIO**
  This is a measure of a company's product portfolio, focusing on the relative contribution of new products to its annual revenue.

- **II4: MEGA TRENDS LEVERAGE**
  This is an assessment of a company's proactive leverage of evolving, long-term opportunities and new business models, as the foundation of its innovation pipeline. An explanation of Mega Trends can be found here.

- **II5: CUSTOMER ALIGNMENT**
  This evaluates the applicability of a company's products/services/solutions to current and potential customers, as well as how its innovation strategy is influenced by evolving customer needs.
